

Term 2

Typology

From a given (or researched set of plan and section, you should be able to produce 1/50 model, both computer and Physical (white foamboard 3 and 5 mm)

from pictures of the models or of the renders, you should be able to produce a series of terms that qualify them.

Think of the terms used in the graphic exercise: Tension, extension, lateral, frontal, compression, thickness, etc..

With those terms in mind, try to produce a grid that resume and describe your specific project

From this grid produce a model, physical and computer of your housing composition: Seat, stand, lie....

Tutorials and workshop on Friday
Maritime campus
